## VISUALISATION UNIT

**Visualisation Unit is responsible for detection, enhancement of quality, recording and securing of fingerprints. Additionally, experts of this Unit identify new methods for development of marks and introduce them into laboratory routine.**

Forensic „magic” taking place in the Unit allows for things not seen with unaided eye to be visualized. To this end, appropriate examination methods are employed, based on the most recent scientific and technical advancements, such as time-resolved luminescence or Condor hyperspectral imaging system. Visualisation Unit receives requests for casework examinations of high profile or most serious criminal incidents from all over Poland. Experts work in line with the CFP quality management system and international ISO 9001 and ISO/IEC 17025 standards. They cooperate with a number of national and international forensic-related institutions, in addition to active participation in ENFSI Fingerprint Working Group. Furthermore, visualisation experts carry out research and development activities on state-of-the-art technologies and testing methods in the area of state security.
